

Technical Issue

Tuesday, September 12, 2017 19:58

Parameters:

Reseller/ White Label: GreenChart

Underlying Data Feed: FXCM

Data Feed: SC Data - All services [data]; or

Data Feed: SC Forex Data (FXCM) [data]

Data/Trade Service Settings

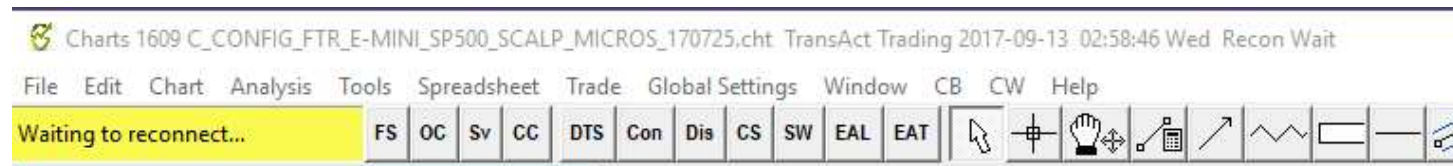

The screenshot shows the 'Data/Trade Service Settings' dialog box for 'TransAct Trading [trading]'. The 'Service' dropdown is set to 'TransAct Trading [trading]'. A table lists the following settings:

Service Setting	Value
Connection Type:	Demo
Port:	1869
Username:	Vestsure
Password:	*****
Account:	42470
Timestamp Using Local Computer...	False

Below the table is a button labeled 'Select an input in the list above'. Underneath is a 'Saved DTS Configuration' section with a 'DTS Config:' dropdown and 'Load', 'Save', and 'Delete' buttons. At the bottom are 'OK', 'Cancel', and 'Help' buttons.

On the right side of the dialog, there are several checked options: 'Connect on Program Startup', 'Reconnect on Failure', 'Enable FIX Logging', 'Allow Support for Sierra Chart Data Feeds'. There are also unchecked options: 'Support Alternate Forex Historical Data', 'Download Dividend Adjusted Historical Data', and 'Show Passwords'. Below these are buttons for 'Data File Management', 'Advanced', 'SC Server Settings', and 'Proxy Settings'. The 'Time Zone' is set to 'UTC (+0 UTC)', 'Intraday Data Storage Time Unit' is '1 Second', and 'Number Of Stored Time And Sales Records' is '4000'. The 'Max Historical Intraday Days To Download' section shows 'Non-Tick Data' and '1-Tick Data' both set to '186'.
