Stair Step Connector Lines

25144

Obstruction of candlestick viewing by Pivot Point name labels when not using "Forward Project Pivot Point Lines" for Daily and Weekly Pivots. Ideally the labels would be move to the right a bit.

Although the stair step function, if I could control it with toggling, might help at times by moving the label out of the way as shown on the Monthly Pivots, the stair step lines become a tangled mess.

"Forward Project Pivot Point Lines" For Monthly Pivots only

This 60 minute chart shows the stair steps I can't seem to get rid of. When they run together vertically as was the case apparently on the stock chart with NYSE trading hours only, they pile up into a vertical line.

It would be nice if I could remove the stair step line, keep the Forward Projecting lines for the next trading session AND have label shown on the current session's lines.

Without the staircase lines it's difficult to tell which of the current sessions lines are which label. That's important in trading.

For example, without the staircase connector, which Pivot Point is this one with the red dotted line?
