symbol of DAX to CQG WebAPI, however, on Sierra Chart the closing price at 3:00 pm based on (Chicago Time Zone) does not display. For example, on June 9th the closing price for DAX is 14,090 displayed and the chart only shows the market price up to 2:55 pm. Also the open suppose to be at 7:10 pm based on Chicago Time Zone but the open time in Sierra Chart is shown to be 7:15 pm. Time Zone. It seems there is an issue with opening and closing time as it is 5 minutes behind when it is closing and 5 minutes ahead when it opens. I have also attached a screen shot of the session

in Sierra Chart is absolutely correct. It is correct. And you must look at the prices relative to the time zone of the exchange in which case this is EUREX. There is no validity whatsoever to look at them any help at all regarding that.

for [Intraday Charts](#) you can do that:

a in a Historical Daily chart including the official settlement:
